

The Little House and the Big Trees

By: Lilah Karwoski

There is a house in a forest and animals live in it. There was a tiger named Cheetah and a ladybug named Ladybug.

One day, they were planting a plant and one day, it grew into a big, large tree. And then, grass sprouted all around it. And flowers started growing. Pink and red and purple and blue. And animals thought it was beautiful.

And then, they planted another plant and they watered it. And then they got a bird feeder and a hummingbird feeder.

And then they got a rocketship and they took one of their stuffies to the moon. And there were space aliens there.

They loved how the flowers grew up beside the tree. And then the animals' moms and dads came to look at their treehouse. And then their dads made it have a slack line and hanging obstacle course.

And then the treehouse and the flowers
looked beautiful. The flowers grew a little taller
and grew fruits.

The End
